

NIKKEN SEKKEI

WE ARE NIKKEN

Founded over 125 years ago, Nikken Sekkei has evolved alongside Japan's modernization. Our design processes are shaped by the unique conditions of Japan, including limited land area, frequent natural disasters, and seasonal climate variations. Today, we also address climate change and societal issues such as an aging population, declining birthrate, and densely populated urban areas.

Our experience in addressing these issues has led us to pursue eco-conscious designs and advanced technologies for a sustainable future. Drawing from our global project experience, our diverse team of experts collaborates to provide optimized solutions tailored to each client. We build trust through deep knowledge of local culture and regulations.

Our mission is to give shape to our clients' visions and make meaningful contributions to society. For every new challenge, we apply our professional expertise and innovative thinking to create sustainable urban environments for future generations.

We are a collective of architects,
designers and experts working across multiple disciplines.

MISSION 1	To achieve a better urban environment supporting the well-being of people through design
MISSION 2	To propose context-customized solutions and visionary designs
MISSION 3	To create timeless elegance and enduring value

OUR CORE VALUE

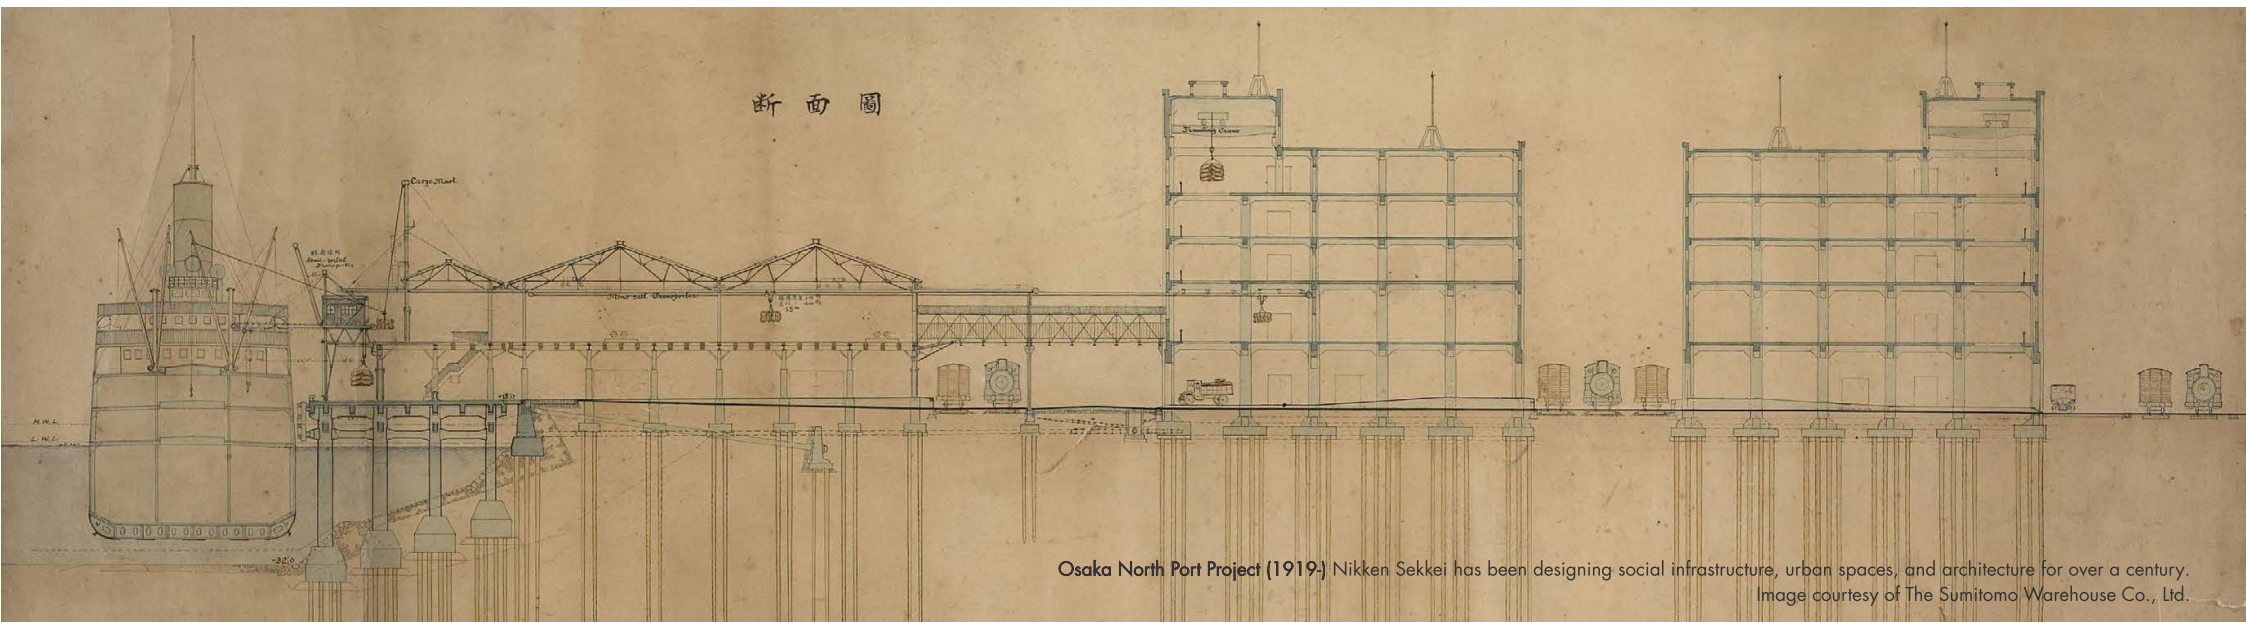

Philosophy of NIKKEN GROUP

We contribute to society through work that offers true value. With this as our core objective, we grow as individuals and develop as a worthy company.

Brand Tagline

EXPERIENCE, INTEGRATED

Integrating accumulated proficiency to deliver rich experiences.

OUR EXPERTISE

<p>Architectural Design</p> <p>We aim to provide a total holistic multi-disciplinary design service.</p>	<p>Interior Design</p> <p>When designing interior space, we believe that it is extremely important to emphasize not only aesthetics and decorativeness, but also to pursue functionality.</p>	<p>Structural Engineering</p> <p>Structural design is the key to safety in the creation of any building. We have constantly realized state-of-the-art structural design by developing and implementing cutting-edge technologies.</p>	<p>MEP Engineering</p> <p>Having MEP engineers in-house also promotes sustainability by giving us more control over life-cycle costing (LCC), an increasingly critical consideration for any architectural project.</p>	<p>Computational Design & BIM</p> <p>We are constantly working on providing the best service framework in the ICT age in order to cope with the increasingly complex large-scale buildings and intricate developments.</p>	<p>Urban Design and Planning</p> <p>We draw on the broad in-house resources of planners, urban designers, architects, engineers and landscape specialists to provide integrated solutions focused on environmental and economic sustainability, functionality and visionary appeal.</p>
<p>Civil Engineering</p> <p>We have an extensive track record and experience in planning and designing urban infrastructure facilities.</p>	<p>Landscape Design</p> <p>Aesthetically pleasing outdoor spaces — public and private— serve to visually enhance the immediate surroundings and improve quality of life in the community.</p>	<p>Sustainability / Resilience</p> <p>Sustainability increases environmental resilience and is also important to protect people from risks such as natural disasters.</p>	<p>Management</p> <p>We ensure smooth project progression through services such as corporate real estate consulting, large-scale development management, technical consulting, project management, and construction management for design-build delivery.</p>	<p>Behavioral Design</p> <p>We propose diverse solution—from buildings and spaces to systems and processes—that help to shape the behavior of employees, citizens, and consumers according to the vision of our clients and society.</p>

OUR APPROACH

Responding to modern societal needs

We contribute to society through projects that meet the expectations of today and aspirations of tomorrow

Nikken Sekkei engages in projects designed to meet modern needs. We conduct extensive R&D to acquire knowledge that fosters creative ideas and innovative technologies. We are constantly learning as we contribute to society, enhancing our expertise as a firm and developing new applications of that know-how. This consistent approach to diversifying needs enables Nikken Sekkei to grow with the times alongside clients around the world.

1 From Sustainable to Regenerative

2 Designing the City of the Future

3 Creating Public Spaces that Foster Community Development

4 Connecting the Past and the Future

5 Transit-Oriented Development

6 Utilizing Disaster Experience

7 Making City Icons with Unique Features

ENVIRONMENTAL INITIATIVES

#01 Nikken Sekkei's attitude toward the environment

Environmental Policy of Nikken Sekkei

Nikken Sekkei is committed to conserving and improving the environment with a proper understanding of the expectations of our clients and society.

- 1 We will strive to reduce the environmental impacts of our business activities and improve the environmental performance of cities and buildings based on ongoing quantitative monitoring of energy and resource use.
- 2 We will strive to proactively inculcate our collective intelligence on sustainability both inside and outside the company as professionals of architecture and urban design.
- 3 We will strive to comply with and continuously improve our Environmental Management System (EMS)* for individual and company development and to contribute to our clients and to society at large.

* (EMS): a framework of requirements that enable an organization to reduce its environmental impact and increase operating efficiency based on ISO 14001 standards.

● Climate Emergency Declaration (2021)

Nikken Sekkei declared a climate emergency in 2021, calling on our clients and society to seek a balance between economic activity and carbon neutrality in working styles and urban and architectural design.

● Endorsement of TCFD (2022 –)

We align with the TCFD (Task Force on Climate-related Financial Disclosures) recommendations and disclose information via our sustainability report.

● Targeting carbon neutrality

Nikken Sekkei supports our clients' carbon-neutral strategies as we aim to achieve net-zero CO₂ emissions in our business activities. We propose seven initiatives, including the reduction of operational and embodied carbon, as well as the dissemination of environmental performance evaluation systems.

ENVIRONMENTAL INITIATIVES

#02 Examples of sustainability-focused projects

1 Human-oriented architecture

JR Kumamoto Station Building

- Biophilic design that appeals to all senses
- Provides for comfort through simulations using light, airflow and temperature, and verification of operation

2 Promoting a circular economy

Ariake Gymnastics Centre(Ariake GYM-EX)

- Use of 2,300m² of timber (largest amount for a Tokyo 2020 venue)
- 10% upfront carbon reduction compared to a steel-framed facility
- 90m-span large structure with solid cedar wood seating for 12,000
- Computational design of airflow and thermal environment

3 Technological innovation for resilience

Grand Green Osaka

- Japan's first aquifer thermal energy storage system using the National Strategic Special Zone Program
- First private-sector use of a sewerage heat recovery system in Osaka City

Regenerative Tree

ENVIRONMENTAL INITIATIVES

#03 From sustainable to regenerative

The "Regenerative Tree" prototype, announced by Nikken Sekkei in May 2024, represents a pioneering approach to next-generation skyscrapers, introducing a range of workplace design innovations aimed to adapt to diverse work styles and reduce whole life carbon (WLC) emissions. Featuring an efficient steel-wood hybrid structure, a transport system using express elevators and escalators, diverse shared spaces, and MEP design inspired by biomimicry, this prototype is designed for Tokyo, but adaptable worldwide. We are actively collaborating with clients to implement this concept.

Key Design Features

1. Efficient steel-wood hybrid structure
2. Transport system using express elevators and escalators
3. Diverse shared spaces
4. MEP design inspired by biomimicry

HERITAGE; SINCE 1900

Founded in 1900, 26 professionals embarked on a journey. This was a time when Japan was rapidly pressing forward with modernization. Nikken Sekkei also was beginning to acquire the architectural styles and techniques of the west. This "pursuit of technology" went on to become an embedded basic principle in the firm.

The environmentally conscious design ethos evident in its very first project, incorporating natural day lighting and long building life, endures to this day.

SELECTED WORKS

Nikken Sekkei has over 125 years of history.
Still, we are constantly striving to create new value
to meet new demands.
